

GUESS MY NUMBER

Write a program in which the computer will generate a random number between 1 and 100. The user tries to guess which number the computer chose. If the user guesses correctly the user wins, if they guess incorrectly the computer displays a message to the user 'Too High' or 'Too low'

Grade: What your program does:

60% The computer generates a random number and the user makes 1 guess, then the computer tells them 'Too High' or 'Too Low' and displays what the number was.

68% Same as above but the user makes 3 guesses.

76% Same as above but the user can make an unlimited number of guesses.

84% Same as above but at the end it tells the user how many guesses it took.

92% Same as above but there is a rating at the end.

100% Same as above but make it 2 players (each player has a number to guess. Winner is determined by who made the least guesses).
